## **ABSTRACT**

The study determined the contribution of the “Adopt-A-Tree Program” of the maritime university, John B. Lacson Foundation Maritime University (JBLFMU)-Molo towards the global warming mitigation. This study included the experiences, learnings, and challenges of the faculty members, staff, and students as part of the environmental education (EE) of the university. The researchers employed the mixed-method by Creswell (2016). The quantitative-statistical tools used in this study were frequency count, percentage, and rank. The “global warming mitigation contribution” was measured using the “shaded-area” contributed by the trees and the identification of the “flora” thriving under
